TEXT COIN HOW TO

ABOUT US

TEXTcoin (\$TXC) is a decentralized cryptocurrency designed to promote financial independence and local commerce. It was created by Bobby Gray with the goal of serving as the future of crypto providing peer-peer payment access as well as a fast and inexpensive way to buy sell and trade crypto currency.

Key characteristics of TEXTcoin:

- Technology: TEXTcoin is a decentralized, proof-of-work cryptocurrency that was forked from Litecoin, using the Scrypt hashing algorithm. It is a "Layer 1" blockchain, meaning it operates on its own network rather than on top of an existing one.
- Mining: The coins are created through a mining process that the TEXTcoin project claims takes place exclusively within Texas, with no pre-mined coins. Mining shares are sold to allow individuals to participate and earn a portion of the newly minted coins.
